xtension. The driver database is filled using a continuous data stream of new products. The major features of this strategy are: 1. The EDSI project has a total of six members: two industrial partners, two academic partners and two end-users. -1.2. 2. Both industries and research centres are involved. 3. The project consists of three linked phases: 1. Geographic information. The geographic information can be collected using different types of sensors. -1.3. 2. Data processing and manipulation. Sensor data is stored in databases. -1.4. 3. Data fusion and interpretation. The data is analysed and fused to produce novel information. -1.5. 4. Knowledge dissemination. The project will produce a user-friendly database. The developers of the database are most of the time industrial and academic partners, who want to disseminate information to their own end users in a very simple way. -1.6. 5. Technology transfer and support. Research centres and industry partners want to transfer their knowledge on the technology and market of their particular domain. -1.7. 6. Industrial environment and economic analysis. Industry and research centres want to investigate how their new product can be better inserted in the current industry market. In this phase, the economical costs of different manufacturing options are estimated. The economic analysis is based on typical statistical methodologies and on the economic information of specific industrial sectors and countries. 1.7. 5. Industrial Environment and Economic Analysis This project is mainly meant to the following three groups: 1. The first group of industrial partners are key players of industrial environment who want to improve their knowledge and understanding on the global environment and on the economic market of their particular domain. -2.2. 2. The second group of industrial partners is composed by companies who want to investigate the contribution of their new product or process to the environment and to the economical market. -2.3. 3. The third group of industrial partners is composed by companies who want to investigate the economic value of their new product. -2.4. 3. Academic Partners Academic partners have a common goal with industrial partners to develop a further knowledge on the environmental impact and economic markets of their particular domain. The main objectives of this group are the following: 1. To promote the dissemination of scientific and technological knowledge and transfer of technology 2. To develop a technology transfer network to increase the European competitiveness 3. To develop the mobility of researchers and technicians 4. To improve the quality of research and training through the set 82157476af
